

Product Requirement Document (PRD)

1. PRD Overview

- **Product Name:** Roast Your Workspace
- **PRD Version:** 1.0.0
- **Date:** September 18, 2026
- **Product Stage:** Greenfield / MVP Definition
- **Document Owner:** Lead Product Manager
- **Primary Stakeholders:** Product Management, Engineering, UX/UI Design, Moderation Operations
- **Current Status:** Ready for Engineering and Design Handoff
- **One-Line Product Definition:** An internal, domain-verified workspace banter and micro-social platform where verified organization members anonymously share feedback, gossip, and assign Indian memes under strict automated content guardrails.

2. Executive Summary

Roast Your Workspace is a localized internal workspace platform designed to allow employees and university students to share candid feedback, watercooler gossip, and humorous Indian meme assignments in a safe, anonymous environment.

By enforcing strict **1:1 email domain verification** (@company.com or @institute.edu.in), the platform isolates organizations so that content never leaks externally. Anonymity is protected via automated author token stripping, while workplace harassment and abuse are prevented through a real-time **Automated Moderation & Decency Engine** powered by a pre-loaded offensive language dataset.

The MVP focuses on solving workplace monotony and communication friction by delivering a verified employee/student directory, anonymous public roast posts, an Indian meme library assignment module, and a daily gossip channel. Success will be measured by 1-week user activation, weekly active roasters, and zero high-severity moderation breaches.

3. Problem Definition

3.1 Core Problem

Employees and students lack a safe, internal, and structured outlet to express candid feedback, banter, lighthearted grievances, and workplace humor without fear of social awkwardness, career backlash, or administrative retribution.

3.2 Problem Context

Workplace hierarchies and formal communication channels (Slack, Teams, Outlook, WhatsApp) discourage honest or humorous interactions. Employees suppress micro-frustrations, leading to disengagement, gossip leaking to external public platforms (e.g., Glassdoor, Reddit, LinkedIn), or toxic work environments.

3.3 Existing Alternatives

- **External Anonymous Platforms:** Blind, Reddit, Grapevine, Fishbowl.
- **Internal Tools:** Slack channels (#random, #fun), MS Teams, anonymous Google Forms.
- **Direct Verbal Gossip:** Watercooler talks, private 1:1 messaging apps.

3.4 Problems with Existing Alternatives

- **Blind / Grapevine / Reddit:** Global/public exposure. Posts can leak company secrets publicly, harming brand reputation externally.
- **Slack / MS Teams / Google Forms:** Lacks true anonymity; users do not trust administrative backend privacy. Forms lack engagement, feeds, and gamification.
- **Private WhatsApp / DM Groups:** Fragmented, creates cliques, excludes peers, and offers no structured platform for constructive or fun organization-wide banter.

3.5 Problem Evidence

- **Confirmed Evidence (Provided):** Core product premise specified by stakeholder (need for domain-isolated directory, anonymous comments, meme tagging, and decency filters).
- **Assumptions:** High user demand for internal humor; significant reduction in toxic behavior if an automated profanity gatekeeper is active.
- **Research Still Required:** Surveying target users on willingness to pay for "Unmask Mode" (Premium) and measuring comfort levels with organization-only domain verification.

3.6 Why Now

The rise of hybrid work and academic setups has fragmented workplace culture. Employees and students are increasingly accustomed to meme culture (specifically localized Indian pop-culture references) as a primary mode of communication and stress relief.

4. Product Thesis

We believe that helping **verified internal employees and students** to **share anonymous feedback, workplace banter, and meme assignments** through **domain-isolated feeds and real-time profanity moderation** will result in **higher workplace engagement and psychological relief** without **exposing the company to public brand damage or internal harassment**.

- **Core Value Proposition:** Safe, internal, anonymous workplace banter protected by automated decency filters.
- **Primary Differentiator:** Domain-enforced internal isolation paired with a curated Indian pop-culture meme engine.
- **Product Principles:**
 1. *Anonymity First, Safety Always:* Protect user identity rigorously, but filter toxicity aggressively.
 2. *Strict Organization Boundary:* What happens in the workspace stays in the workspace.
 3. *Lighthearted & Culturally Relevant:* Lean heavily into localized humor and memes.
- **Reasons Users May Not Adopt:** Fear of employer tracking/de-anonymization; low initial directory density (cold-start problem).

5. Target Users

Primary User: Verified Employee / Student ("The Roaster")

- **Context:** Software developers, corporate associates, university students operating in hierarchical organizations.
- **Needs:** Safe outlet to vent, share banter, roast management/peers lightheartedly, and bond over Indian pop culture memes.
- **Frustrations:** Fear of HR repercussions; lack of informal engagement channels; sterile corporate communication.
- **Technical Comfort:** High (daily users of web/mobile apps).
- **Frequency of Use:** 2–5 times daily during breaks or post-work hours.

Secondary User: Workplace/Institute Administrator (HR / Student Council)

- **Context:** HR managers, department heads, or campus administrators monitoring organizational health.
- **Needs:** Ensure platform decency, prevent severe bullying/harassment, maintain workplace compliance.
- **Frustrations:** Unmoderated external leaks on Reddit/Glassdoor; toxic workplace culture.

6. Jobs to Be Done

- **Functional Job:** When I notice an annoying or funny workplace situation, I want to anonymously tag a peer or post on the gossip feed so that I can express myself without exposing my identity.
- **Emotional Job:** When work feels stressful or overly formal, I want to read local office roasts and memes so that I feel amused, relaxed, and validated.
- **Social Job:** When interacting with colleagues, I want to be seen as witty and culturally

plugged-in without risking my professional standing.

7. Research Plan & Assumption Matrix

Assumption Matrix

Assumption	Risk Level	Evidence Available	Validation Method	Priority
Users trust domain-based verification without fearing identity exposure.	High	Provided premise	Security audit disclosure + Beta testing survey	P0
Pre-loaded abusive word datasets effectively catch toxic behavior.	High	Standard NLP practices	Moderation benchmark test on Indian slang/profanity	P0
Indian meme templates increase daily active engagement over text roasts.	Medium	Market trend analysis	A/B testing text vs. meme post conversion	P1

8. Competitor and Alternative Analysis

Competitor / Alternative	Target Audience	Core Offering	Pricing / Business Model	Strengths	Weaknesses / Gaps	What NOT to Copy
Blind	Tech/Corporate	Anonymous	B2B Ads / Monetization	High anonymity	Global/Public feeds	Public cross-co

	Professionals	professional network	tion	y, strong adoption	lead to PR leaks & extreme toxicity	mpany feeds
Grapevine (India)	Indian Startup & Corporate Tech	Salary insights & anonymous chats	Ads / Referral features	Highly localized to Indian tech ecosystem	Cross-company gossip; no directory-based peer meme tagging	Public salary/employer baseline shaming
Slack #random	Internal Workspace Teams	Non-work chat channel	SaaS Subscription	Integrated into daily flow	Non-anonymous; strictly monitored by management	Real-identity tracking on banter feeds

9. Press Release and FAQ (PRFAQ)

9.1 Future Press Release

HEADLINE: Roast Your Workspace Launches Domain-Isolated, Anonymous Banter Platform Built for Indian Workspaces and Campuses

SUBHEADLINE: Bringing lighthearted banter, Indian meme templates, and automated profanity moderation to corporate and academic teams securely.

CITY, COUNTRY: Gurugram, India — Roast Your Workspace today announced the official release of its anonymous workspace engagement platform. Built specifically to solve corporate fatigue and rigid workplace hierarchies, the app allows employees and students to anonymously roast colleagues, post daily gossip, and tag peers using popular Indian meme templates—all safely locked inside their official organization domain.

"Workplace stress needs a safe, internal outlet," said the Product Team. "By pairing 1:1 domain isolation with a robust real-time profanity filter, we give employees the fun of anonymous

banter without exposing companies to public leaks or harassment risks."

9.2 External Customer FAQ

- **Is my identity truly hidden from my HR and manager?** Yes. Public API queries strip all author user IDs. Encryption tokens decouple user credentials from post content.
- **What happens if someone posts offensive or abusive content?** All posts pass through an automated Moderation Filter Engine. If a post contains banned keywords or profanities, publication is instantly blocked.
- **Can people outside my company see our posts?** No. Content is strictly partitioned by domain (e.g., @company.com). Cross-company feeds do not exist.

9.3 Internal Stakeholder FAQ

- **Why focus exclusively on Indian meme templates for MVP?** Localized cultural references (Bollywood, Indian web series) drive significantly higher emotional engagement and virality in target Indian corporate/academic hubs.
- **How do we make money?** Future monetization via "Unmask Mode" (Premium membership allowing limited author reveal features) and organization-wide gamification upgrades.

10. Goals and Non-Goals

Product Goals

1. Deliver a 100% domain-isolated workplace MVP platform.
2. Maintain < 0.1% rate of unmoderated abusive content published.
3. Achieve > 40% WAU (Weekly Active Users) within onboarded organizations.

Non-Goals (MVP Out of Scope)

- **Direct Messaging / Private Chat:** No 1-on-1 private messaging capabilities between users to keep interactions public and moderated.
- **Cross-Company / Global Feeds:** Multi-organization or public feeds are strictly excluded; content remains completely isolated per company domain.
- **External Social Media Sharing:** Posts cannot be natively exported to public platforms to prevent corporate IP leaks.

11. Success Metrics

Metric Category	Metric Name	Calculation / Definition	Target / Expectation
North-Star	Weekly Active	Unique verified	> 35% of domain

	Roasters (WAR)	users posting/commenting per week	userbase
Activation	Verified Onboarding Rate	(Verified Signups / Total Initiated Signups) * 100	> 85%
Engagement	Meme Assignment Ratio	Total Memes Assigned / Total Text Posts	> 1.2x
Quality/Safety	Moderation Block Rate	(Blocked Abusive Posts / Total Post Attempts) * 100	Monitored (< 5% false positives)
Guardrail	User Abuse Report Rate	Total Reported Posts / Total Published Posts	< 1.0%

12. Product Scope and Prioritisation (MoSCoW)

- **Must Have (P0 - MVP):**
 - Domain-based Signup & Verification (@company.com / @institute.edu.in).
 - Employee/Student Directory grouped by designation and department.
 - Anonymous Public Commenting Engine.
 - Automated Abusive Content Moderation Engine (Word dataset filter).
- **Should Have (P1):**
 - Indian Meme Assignment Engine (Curated Bollywood/Series meme library).
 - Daily Gossip Feed (Separate non-profile organization thread).
- **Could Have (P2):**
 - Premium Membership ("Unmask Mode" reveal).
 - User Activity & Streak Tracker.
- **Not Now (Out of Scope):**
 - 1:1 Private DMs.
 - Cross-organization multi-tenant feeds.

13. Information Architecture

13.1 Hierarchical Sitemap

14. End-to-End User Journeys

Journey 1: Core Anonymous Meme Assignment (Happy Path)

1. **Trigger:** User wants to poke fun at a colleague's constant coffee breaks.
2. **Entry:** Opens Dashboard -> Navigates to Colleague Directory.
3. **Action:** Selects colleague profile -> Clicks "Assign Indian Meme".
4. **Selection:** Chooses a popular Indian meme template -> Types custom top/bottom text.
5. **System Verification:** Post passes Moderation Engine (no abusive words detected).
6. **Outcome:** Meme appears publicly on colleague's profile; author ID is permanently scrubbed from UI query.

Journey 2: Moderation Block (Error Recovery)

1. **Action:** User attempts to submit a comment containing a word flagged in the profanity dataset.
2. **System Response:** Form submission halts; red inline banner displayed: *"Your post contains prohibited language. Please align with workplace decency guidelines."*
3. **Recovery:** User edits text to remove flagged word and re-submits successfully.

15. User Stories

ID	Category	User Story
US-001	Onboarding	As a user, I want to sign up

		with my official office email so that I am automatically placed in my company's isolated workspace.
US-002	Directory	As a user, I want to view a directory of colleagues categorized by designation so I can locate specific peers.
US-003	Banter	As a user, I want to post an anonymous comment on a colleague's profile so I can roast them without career risk.
US-004	Safety	As a system, I want to scan all submissions against an offensive word dataset so toxic posts are blocked before publishing.
US-005	Memes	As a user, I want to select an Indian meme template and attach custom text to a colleague so that banter is fun and culturally relevant.

16. Acceptance Criteria

US-001: Domain Onboarding

- **Given** a user inputs an email john@external.com that is not an approved domain, **When** they submit signup, **Then** show error: *"Please use your official company or institute email."*
- **Given** a valid @company.com email, **When** signup is completed, **Then** generate verification link and bind user account to Organization_ID matching company.com.

US-004: Moderation Engine Filter

- **Given** a post payload containing a string found in moderation_keywords table, **When** the user clicks "Post", **Then** return HTTP 422 Unprocessable Entity, prevent database insertion,

and display warning UI.

17. Functional Requirements

- **FR-001 (Domain Isolation):** The system must restrict database read/write operations for posts strictly to users sharing the same organization_id.
- **FR-002 (Author Token Stripping):** Public GET API endpoints for posts MUST NOT return author_id or user metadata in the JSON payload unless the requester holds verified is_premium = true status.
- **FR-003 (Meme Engine):** The system must provide a dataset of at least 50 pre-seeded Indian meme templates with category tags (bollywood, web_series, classic).

18. AI & Moderation-Specific Requirements

- **Purpose:** Automated profanity and toxic language containment.
- **Input Data:** Raw text strings from post comments, meme top/bottom text, and gossip feeds.
- **Execution:** Exact regex/dictionary matching against moderation_keywords dataset combined with basic fuzzy string matching (handling Leetspeak replacements like @ for a).
- **Fallback:** If moderation engine service times out, system MUST default to queuing post in "Pending Review" state rather than auto-publishing.

19. UX and Interaction Requirements

- **Brand Tone:** Playful, witty, clean, vibrant (warm tones, clean typography).
- **Primary Actions:** "Roast Anonymously", "Assign Meme", "Post Gossip".
- **Destructive Actions:** Deleting posts requires dual-confirmation modal.
- **Empty States:** Directory or Gossip feed empty states display lighthearted Indian meme artwork with CTA: "No gossip yet? Start the first roast!"

20. Screen Inventory

Screen Name	Purpose	Entry Point	Key UI Components	MVP Status
SCR-01: Auth/Signup	Email verification & account creation	App Entry	Email input, Password, Domain validator badge	MVP

SCR-02: Directory Dashboard	Browse colleagues by role	Main Nav	Designation tabs, Employee profile cards	MVP
SCR-03: Profile Roast View	View & post roasts on a specific user	Card Click	Post feed, Anonymous comment box, "Assign Meme" CTA	MVP
SCR-04: Meme Creator Modal	Select template & customize text	Profile / Feed	Image grid (Indian memes), Top/Bottom text inputs, Preview canvas	MVP
SCR-05: Gossip Feed	Org-wide anonymous news feed	Main Nav	Threaded post list, Like/Upvote buttons	MVP

21. State and Edge-Case Matrix

Feature	Scenario	Expected System Behaviour	User Message	Recovery Action
Onboarding	Invalid domain	Block account creation	"Domain not recognized for organization workspace."	Use official work email
Post Engine	Profanity detected	Intercept submit; discard payload	"Post blocked due to inappropriate language."	Edit text and retry
Post Engine	Network Failure	Retain drafted text in local state	"Connection lost. Draft saved."	Auto-retry on reconnect

Directory	Single user in domain	Render empty state directory	"You're the first one here! Invite peers."	Share invite link
-----------	-----------------------	------------------------------	--	-------------------

22. Data Model

Entity Relationship Diagram (Text-based)

23. Roles and Permissions

Role	Domain View	Post Anonymously	View Author ID	Delete Posts
Standard User	Own Domain Only	Yes	No	Own Posts Only
Premium User	Own Domain Only	Yes	Yes ("Unmask Mode")	Own Posts Only
Org Admin / Moderator	Own Domain Only	Yes	Yes (Audit Log)	Any Flagged Post

24. Integrations

- **Email Provider (SendGrid / AWS SES):** Transactional emails for OTP verification links (Required for MVP).
- **Cloud Object Storage (AWS S3 / Cloudflare R2):** Host Indian meme template assets and profile avatars (Required for MVP).

25. Non-Functional Requirements

- **Performance:** API p95 response time < 200ms for directory and feed loads.
- **Security:** AES-256 encryption at rest for database tables; SSL/TLS in transit. Direct user IP

- logging stripped from post records.
- **Availability:** 99.5% uptime target.

26. Accessibility Requirements

- High-contrast mode support for text feeds.
- Touch target sizes minimum 44x44px for touch interfaces.
- Semantic HTML5 elements (<main>, <nav>, <article>) across responsive web templates.

27. Privacy, Security, and Trust

- **Data Minimization:** No personal phone numbers or home addresses collected.
- **Anonymity Architecture:** Post creation routines decouple author_id into a separate non-relational audit log accessible strictly under court order or severe legal compliance breaches.

28. Analytics and Event Tracking

- user_signed_up (Properties: domain, timestamp)
- post_created (Properties: post_type [comment|gossip|meme], has_meme: boolean)
- moderation_flag_triggered (Properties: flagged_word_category, action_taken: blocked)
- meme_assigned (Properties: template_id, category)

29. Technical Approach

- **Frontend:** React.js / Next.js with Tailwind CSS (Responsive Web).
- **Backend:** Node.js (Express) or Python (Django REST Framework).
- **Database:** PostgreSQL (Relational integrity, multi-tenant row isolation via organization_id).
- **Caching:** Redis for rapid session checking and moderation keyword lookup caching.

30. Dependencies

- Pre-compiled Indian profanity and abusive word dataset (Blocker for Moderation Engine).
- Curated repository of high-resolution, copyright-cleared Indian meme template images (Blocker for Meme Engine).

31. Risks and Mitigations

Risk	Impact	Probability	Mitigation
Severe workplace harassment	High	Medium	Implement user "Report Post"

circumventing word filter			button which temporarily hides post upon 3 flags.
Cold-start problem (Directory empty upon initial company launch)	High	High	Seed directory with dummy public profiles or enable peer self-onboarding invites.

32. QA and Test Plan

- **Unit Testing:** Moderation filter function unit test suite running 500+ offensive string variations (including Leetspeak).
- **Integration Testing:** Verification that User A from Domain_X cannot fetch endpoints for Domain_Y.
- **Security Audit:** Penetration testing to verify author_id cannot be reverse-engineered from public API payloads.

33. Delivery Plan

1. **Phase 1 (Week 1–2):** Architecture setup, Multi-tenant DB schema, Auth & Domain Verification.
2. **Phase 2 (Week 3–4):** Employee Directory, Moderation Filter Engine, Anonymous Commenting API.
3. **Phase 3 (Week 5):** Indian Meme Engine Library & Custom Canvas Generator integration.
4. **Phase 4 (Week 6):** QA, Penetration Testing, Security Audit, Internal Beta Launch.

34. Assumptions

1. **Assumption:** Users will accept email domain verification as sufficient proof of organization membership.
 - *Why:* Standard industry practice (e.g., Blind, Slack).
 - *Risk:* Users using personal emails cannot join.
2. **Assumption:** Indian meme templates provide enough engagement value to make the platform sticky.
 - *Validation:* Measure meme assignment share vs standard comments post-launch.

35. Open Questions

- [Blocking] Should admins have an explicit dashboard to unmask users in extreme legal harassment cases? (*Assumption: Yes, required for compliance*).
- [Non-blocking] Will users prefer dark mode by default for late-night workplace roasting?

36. Final Build Handoff (For AI Coding Agent / Development Team)

- **Goal:** Build the MVP web app for "Roast Your Workspace".
- **Core Stack:** Next.js (Frontend), Node.js/Express or Python/Django (Backend), PostgreSQL (Database).
- **Primary Workflows:**
 1. Signup restricted by domain -> Create Profile.
 2. Load Directory grouped by designation.
 3. Post anonymous comment or Indian meme assignment on target Profile.
 4. Pass text through local moderation keyword check before DB insertion.
 5. Fetch posts for Profile without exposing author_id in API response.
- **Strict Non-Goals:** Do not build 1:1 direct messaging or public global feeds. Maintain strict multi-tenant row isolation per organization_id.
